Installation

Création d'une clé USB amorçable

Depuis mon poste de travail FreeBSD 10.1 :

```
# umount /dev/da0a
# gzip -dc pfSense-memstick-serial-2.2.2-RELEASE-amd64.img.gz | dd
of=/dev/da0 obs=64k
484880+0 records in
3788+1 records out
248258560 bytes transferred in 20.949499 secs (11850334 bytes/sec)
```

- etc.

Configuration

- etc.

Paquetages

- suricata ;
- snort ;
- bacula-client ;
- haproxy ;
- etc.
